

## 4.1 SETUP FOR OWD:

The last business rule functionality to implement before testing your application is a rule to set the Out-of-State checkbox field on the Travel Approval object if out-of-state travel has been chosen. Salesforce offers workflow capabilities that provide a declarative, drag-and-drop design environment to build our business process logic.

The screenshot shows the Salesforce Setup interface for 'Organization-Wide Email Addresses'. The left sidebar contains navigation links for 'Setup', 'Home', and 'Object Manager'. The main content area is titled 'Organization-Wide Email Addresses' and includes a description: 'An org-wide email address allows each user in a user profile to send email using this address. All messages use the same display name and email address. You can also designate an org-wide email address for unmonitored mailboxes that require a verified address.' Below this is a warning: 'WARNING: A VERIFIED EMAIL ADDRESS IS REQUIRED TO OBTAIN A NO-REPLY ADDRESS'. There are two sections: 'Organization-Wide Email Addresses for User Selection and Default No-Reply Use' and 'No email addresses defined'. Both sections have 'Add', 'Previous Page', and 'Next Page' buttons. The bottom of the page shows a search bar and a date/time stamp '28-10-2023'.

## 4.2 FLOW:

The screenshot shows the Salesforce Flow Builder interface for a flow named 'send mail - V1'. The flow is currently 'Inactive' and was last modified 6 minutes ago. The canvas shows a 'Start' node followed by a 'SCHEDULED PATHS' node. The 'SCHEDULED PATH DETAILS' section on the right includes fields for 'Path Label' (set to 'send mail'), 'API Name' (set to 'send\_mail'), 'Time Source' (set to 'Loan c: Last Modified Date'), 'Offset Number' (set to '24'), and 'Offset Options' (set to 'Days Before'). There is a 'Delete Path' button in the top right corner of the details section. The bottom of the page shows a search bar and a date/time stamp '28-10-2023'.
